

“Other” is sibling of “slider”

Fraction is positive

(see LargeSimonMove::slideNode)

Bold solid lines (without arrows) represent edges, with nodes labeled “slider” and “other” relevant to the action being performed. In this case, slider is the sibling of other and the parent of both slider and other slides toward other. Two univents (black dots) on other’s edge must be moved to slider and the time fractions adjusted accordingly.
